EDUCATION

Université de Technologie de Belfort Montbéliard , France

February 2025 - June 2025
Erasmus+ Exchange Program

Yeditepe University, İstanbul

September 2022 - Ongoing
Computer Engineering B.S.

İzmir Atatürk Lisesi, İzmir

September 2018 - June 2021

EXPERIENCE

DringAI (AI Agent Startup)— Software Engineering Intern

August 2025 – September 2025

- Observed and analyzed the development of AI agentic workflows and autonomous software solutions.

Game Development And Animation Club— Founder & Co-President

September 2023 - February 2025

- Spearheaded a team of 12, managing organizational strategy, budgeting, cross-departmental communication and even graphic design.

MaviPiksel İnternet Çözümleri — Software Engineering Intern

July 2024 – August 2024

- Gained hands-on experience in Frontend Development integration within a professional environment using Flutter and Dart.
- Developed an Attendance Tracking System and a TTRPG Dice Engine

PROJECTS

Keep The Power Up: Arcade Management Game | Programmer | Unity, C# (December 2025)

- Designed and developed game mechanics and UI systems as the sole programmer in a multidisciplinary duo during a 48-hour Startgate Game Jam. Successfully passing the qualifying round, ranking among the top entries.

3D Printer Price Scraper & Tracker | Python, Playwright, SQLite, Github Actions (Ongoing)

- Developing a web scraping system to monitor real-time pricing across multiple e-commerce platforms for my personal use.

Barcode Reader: Price Comparison App | Android Studio, Java, SerpApi

- Developed a mobile application that identifies consumer products via barcode scanning.
- Integrated Google Shopping to scrape and aggregate real-time pricing data and store details from multiple online retailers.

Linux Kernel Modification | C, Linux 2.4

- Modified the Linux kernel to implement a Lottery Scheduler as a process prioritization algorithm. Integrated a new System Call to manage and monitor process states at the kernel level.

Classic Tetris Engine | Pure C

- Engineered a fully functional Tetris game for the console using Pure C, with efficient game loop logic, real-time user input handling and collision detection algorithms without external libraries.

SKILLS

Programming Languages

- Java
- C, C++
- C#
- Python
- Dart
- SQL

Frameworks & Tools

- Git
- Unity
- Flutter
- Android Studio
- Adobe Photoshop
- PowerBI

Languages

- English (C1)
- French (A2)

HOBBIES & INTERESTS

- TTRPG, Storytelling.
- Strategy Video/Board Games
- IoT Projects (Arduino & ESP)
- Clean Energy, and Sustainability
- World History, Art History
- Popular Science.
